

JP920030180US1

1. (Currently Amended) A method for language modelling of mixed language expressions, said method comprising the steps of:
  - storing word equivalence probabilities relating to words of a first language and words in at least one other language;
  - generating a monolingual word history in the first language based upon a mixed language word history and using the stored word equivalence probabilities;
  - generating monolingual next word hypothesis probabilities in the first language based upon the monolingual word history; and
  - determining a probability of ~~the~~ a next word in ~~the~~ a mixed language expression based upon the monolingual next word hypothesis probabilities and the stored word equivalence probabilities.
2. (Currently Amended) The method as claimed in claim 1, further comprising the step of summing the products of word equivalence probabilities with respective monolingual next word hypothesis probabilities.
3. (Original) The method as claimed in claim 1, wherein the monolingual next word hypothesis probability is a statistical language model.
4. (Original) The method as claimed in claim 1, further comprising the step of converting a mixed language word sequence to a monolingual word sequence using word equivalence probabilities.

JP920030180US1

5. (Original) The method as claimed in claim 1, further comprising the step of determining the word equivalence probabilities based upon a parallel text corpus that has corresponding expressions in the first language and the at least one other language.
6. (Original) The method as claimed in claim 1, further comprising the step of determining a probability of a foreign language next word hypothesis given a base language word history.
7. (Original) The method as claimed in claim 1, further comprising the step of using a parallel text corpus that has corresponding expressions in the first language and the at least one other language.
8. (Currently Amended) A computer program product for language modelling of mixed language expressions, the computer program product comprising computer software recorded on a computer-readable medium for performing the steps of:
  - storing word equivalence probabilities relating to words of a first language and words in at least one other language;
  - generating a monolingual word history in the first language based upon a mixed language word history and using the stored word equivalence probabilities;
  - generating monolingual next word hypothesis probabilities in the first language based upon the monolingual word history; and
  - determining a probability of the a next word in the a mixed language expression

JP920030180US1

based upon the monolingual next word hypothesis probabilities and the stored word equivalence probabilities.

9. (Currently Amended) A computer system for language modelling of mixed language expressions, the computer system comprising ~~computer software recorded on a computer-readable medium for performing steps of:~~

computer software code means for storing word equivalence probabilities relating to words of a first language and words in at least one other language;

computer software code means for generating a monolingual word history in the first language based upon a mixed language word history and using the stored word equivalence probabilities;

computer software code means for generating monolingual next word hypothesis probabilities in the first language based upon the monolingual word history; and

computer software code means for determining a probability of the a next word in the a mixed language expression based upon the monolingual next word hypothesis probabilities and the stored word equivalence probabilities.

Please add the following new claims:

10. (New) The computer program product as claimed in claim 8, further comprising the step of summing products of word equivalence probabilities with respective monolingual next word hypothesis probabilities.

JP920030180US1

11. (New) The computer program product as claimed in claim 8, wherein the monolingual next word hypothesis probability is a statistical language model.

12. (New) The computer program product as claimed in claim 8, further comprising the step of converting a mixed language word sequence to a monolingual word sequence using word equivalence probabilities.

13. (New) The computer program product as claimed in claim 8, further comprising the step of determining the word equivalence probabilities based upon a parallel text corpus that has corresponding expressions in the first language and the at least one other language.

14. (New) The computer program product as claimed in claim 8, further comprising the step of determining a probability of a foreign language next word hypothesis given a base language word history.

15. (New) The computer program product as claimed in claim 8, further comprising the step of using a parallel text corpus that has corresponding expressions in the first language and the at least one other language.

JP920030180US1

16. (New) The computer system as claimed in claim 9, further comprising computer software code means for summing products of word equivalence probabilities with respective monolingual next word hypothesis probabilities.

17. (New) The computer system as claimed in claim 9, wherein the monolingual next word hypothesis probability is a statistical language model.

18. (New) The computer system as claimed in claim 9, further comprising computer software code means for converting a mixed language word sequence to a monolingual word sequence using word equivalence probabilities.

19. (New) The computer system as claimed in claim 9, further comprising computer software code means for determining the word equivalence probabilities based upon a parallel text corpus that has corresponding expressions in the first language and the at least one other language.

20. (New) The computer system as claimed in claim 9, further comprising computer software code means for determining a probability of a foreign language next word hypothesis given a base language word history.

21. (New) The computer system as claimed in claim 9, further comprising computer software code means for using a parallel text corpus that has corresponding expressions in the first language and the at least one other language.
